

A fourth of a city is a lot of industrial, retail, office and home building opportunity. The name is Orlandia.

Look East to Orlandia the Newest New Orleans

A new city is taking form within the old: Orlandia, the newest New Orleans. It's 28,000 acres inside corporate limits, with 12,000 people and 50 industries already settled. It's 6,500 more industrial acres to grow on. And it's room for 150,000 more people, 50,000 homes and apartments, room for shopping centers, offices and other developments a city needs. Opportunity abounds in New Orleans. And in Orlandia.

If you're an investor, a developer or a businessman with expansion plans, come talk to us about fully serviced sites, investor priced and financed.

Orlandia, a development of New Orleans East, Inc.

Obtain the HUD property report from developer and read it before signing anything. HUD neither approves the merits of the offering nor the value, if any, of the property.

The State Commercial Tax Credit allows a building to be updated for modern, income-producing use, so long as the work preserves the building's historic character and meets the Secretary of the Interior's Standards for Rehabilitation.

Work generally eligible includes:

Repairing historic features — windows, doors, storefronts, masonry, cornices, and trim. Repair is favored over replacement.

Replacing deteriorated features in kind — when a feature is too far gone to repair, replacing it with a match in design, material, and finish.

Recovering original appearance — removing later, non-historic additions or remodeling that covered or altered the building's historic face.

Cleaning and repointing masonry — using the gentlest methods possible (no sandblasting or harsh power-washing).

Adding modern building systems — new HVAC, electrical, plumbing, lighting, and fire-suppression, installed so they don't damage historic materials.

Code and accessibility upgrades — ADA ramps, life-safety, and egress improvements, designed to fit the building compatibly.

Adaptive reuse — converting the space for a new contemporary use (retail, dining, offices, cultural venue) while keeping key historic spaces intact.

Compatible new additions — typically at the rear or a less-visible side, designed to be distinguishable from the historic building yet compatible in scale and materials.

Compatible signage and awnings — appropriate to the building's storefront and era.

Sensitive energy improvements — weatherization and efficiency upgrades that don't require removing or hiding historic fabric.

Rehabilitation Visualization

Page 2 | 7

These photos do not imply any commitment or decision by the building owners, nor do they reflect what the State would approve for Tax Credit qualification. They illustrate stages of progress observed in other areas that have used programs like the Cultural District and similar initiatives to raise awareness of the need to preserve and rehabilitate New Orleans culture.
